7. (currently amended) An accessory cover for a communications device comprising:
a flap; and
at least one attachment leg, each leg having a proximal end and a distal end, the proximal end of each leg being flexibly connected to the flap, the distal end of each leg being adapted for connection to the communication device, at least a portion of the attachment leg being bendable,

wherein the flap is movable between at least a ~~first~~ closed position and an ~~second~~ open position, wherein the flap remains in the ~~second~~ open position irrespective of the positioning of the accessory cover or the communication device.

8. (currently amended) The accessory cover of claim 7 wherein, in the ~~first~~ closed position, the flap is disposed substantially 90 degrees relative to the attachment legs.

9. (previously presented) The accessory cover of claim 7 wherein at least two of the at least one attachment legs are substantially parallel.

10. (currently amended) The accessory cover of claim 7 wherein the cover provides one of a tactile signal or an audible signal when the cover is moved between the ~~first~~ closed and ~~second~~ open positions.

11. (previously presented) The accessory cover of claim 7 wherein the flap includes at least two notches, each of the notches receiving at least a portion of a respective attachment leg when the cover is moved.

12. (original) The accessory cover of claim 7 wherein the at least one attachment leg includes two substantially parallel attachment legs.

13. (original) The accessory cover of claim 7 wherein the flap is substantially flat.

CE11662JME

14. (original) The accessory cover of claim 7 wherein the flap is substantially rectangular.

15. (original) The accessory cover of claim 7 wherein the distal end of the at least one attachment leg includes one or more slots, whereby the slots lockingly receive a corresponding protrusion on the communication device.

16. (currently amended) The accessory cover of claim 7, wherein, in the ~~second~~ open position, the flap is disposed substantially in the same plane relative to the attachment legs.

17. (original) The accessory cover of claim 7 wherein the distal end of the at least one attachment leg includes one or more protrusions, whereby the one or more protrusions are lockingly received in a corresponding passage on the communication device.

18. (original) The accessory cover of claim 7 wherein at least one projection extends substantially transversely from the flap, the at least one projection shaped to interface with a connector.

19. (original) The accessory cover of claim 18 wherein the at least one projection is shaped to substantially surroundingly receive a connector.

20. (currently amended) The accessory cover of claim 7 wherein the flap includes at least one edge portion, the edge portion including at least one protrusion, wherein the at least one protrusion lockingly engages a portion of the communication device so as to retain the communication device in the ~~first~~ closed position.

21. (currently amended) The accessory cover of claim 7 wherein the flap includes at least one notch, wherein the at least one notch lockingly engages a respective protrusion on the communication device so as to retain the communication device in the ~~first~~ closed position.
